NASA and The Future of Fortran

Tom Clune*
NASA GSFC

*Material derived from Supercomputing 2014
Steve Lionel – Intel Corporation

Applied Modeling & Simulation (AMS) Seminar Series
NASA Ames Research Center, April 28, 2015
Agenda

Recent changes to the standard (F2003, F2008)
Upcoming changes (F2015)
Fortran standards process
NASA engagement
The Present of Fortran

Fortran 2008 (ISO/IEC 1539-1:2010)
• Major features: coarrays, DO CONCURRENT, BLOCK, submodules
• Full implementation by Cray

• Major features: polymorphism and OO, C interoperability, IEEE floating control
• Full implementation by Cray, IBM, Intel, PGI

Compiler Support for the Fortran 2003 and 2008 Standards” updated 3X/year in ACM SIGPlan Fortran Forum:
http://portal.acm.org/sigplan/newsletter/fortran/
Fortran 2015 New Features

Integration of two Technical Specification documents
• TS29113 – Further C interoperability
• TS18508 – Additional parallel features

Limited new features and “wart removal”
• Intrinsics COSHAPE, OUT_OF_RANGE, RANDOM_INIT, RANK, REDUCE
• Procedures are recursive by default (unless NON_RECURSIVE)
• IMPLICIT NONE (EXTERNAL) disables implicit interface
• EX edit descriptor for hexadecimal significand
• G0. d can now be used for integer, logical, character
Further C Interoperability

Guided by requests from MPI Forum

Assumed type dummy arguments: TYPE(*)

Assumed rank dummy arguments: DIMENSION(..)

“C Descriptors” for passing more information to and from C

- ISO_Fortran_binding.h declares C descriptors and procedures for manipulating them
- Fortran compiler automatically creates/interprets these – no visibility from Fortran code

Relaxed restrictions on dummy arguments to BIND(C) procedures:
- OPTIONAL, ALLOCATABLE, POINTER, assumed-shape, deferred-length character now allowed
Additional Parallel Features

Teams of images
Events
Atomic procedures (ATOMIC_ADD, etc.)
Collective subroutines (CO_BROADCAST, CO_MAX, etc.)
Ability to detect “failed images”
Newly Deleted and Obsolescent Features

Deleted features
  • Nonblock DO (not ending on END DO or CONTINUE)

Obsolescent features
  • Labeled DO (DO 10 …)
  • Arithmetic IF
  • BLOCK DATA
  • EQUIVALENCE
  • COMMON
  • FORALL
Current Fortran 2015 Schedule

2015 – Technical work complete
2016 – Draft standard out for ballot
2017 – Publication

But... Parallel features TS not yet final – may affect schedule!
The Fortran Standard Committees

INCITS PL22.3 (aka “J3”)
• The U.S. Fortran Standards committee
• ~12 member organizations (mostly vendors and federally funded orgs)
• Meets 3 times per year
• http://j3-fortran.org

ISO/IEC JTC1/SC22/WG5
• the international Fortran Working Group
• determines the broad technical content of the Standards
• Delegates to PL22.3 as the Primary Development Body
• http://www.nag.co.uk/sc22wg5/
Changing the standard

Anyone can submit a proposed change, but ...
  • Helps to have an advocate at the meeting.

Anyone can attend meetings, but ...
  • Only members can formally vote.
  • At most one member per organization, but multiple alternates

General advice:
  • The committee prefers *use cases* over feature requests
  • Preserve backward compatibility
  • Consider implementation difficulty for vendors
NASA participation

I recently joined J3 as the NASA representative
  • Note that JPL (Cal Tech) also has a representative

Need mechanisms to solicit requirements and priorities across the agency

How to communicate?
  • Mailing list for NASA-centric discussions of the Fortran standard
    • fortran-users@lists.nasa.gov - low bandwidth
    • Requests/discussions for new features
    • Occasional polls for priorities (not a democracy)
  • Or directly Thomas.L.Clune@nasa.gov
  • There may be an alternate member at Ames (Henry Jin)
Potential priorities for Fortran 2020

Improved facilities for generic programming
  • C++ Standard Template Library (STL)
  • Parameterized modules

Improved testability of Fortran code
  • Program by contract
    • Mechanism to check preconditions, post-conditions and invariants on interfaces
  • Exception handling

Checking physical units

Extend OO – e.g. Java style interfaces

Deferred rank arrays

...
Thank you!

Questions / discussion
