

How do I find out many hours I have used and/or have left?

Category: FAQ

Use the job accounting utility `acct_ytd` to obtain resource usage information about your projects.

To view the number of hours remaining for all of your projects on all systems, enter:

```
acct_ytd -c all
```

To view the number of hours remaining for a specific project across all systems, specify the project ID (GID). For example:

```
acct_ytd -c all a0800
```

You can also obtain detailed billing information, such as the number of SBUs that have been used in the current operating year, by using the `acct_query` utility.

For more information about how to use these utilities, see [Job Accounting Utilities](#), `man acct_ytd`, and `man acct_query`.
