

IDL

Category: Licensed Application Software

IDL is a software for data analysis, visualization, and cross-platform application development. IDL combines tools for any type of project, from "quick-look," interactive analysis and display to large-scale commercial programming projects.

For more information, please visit the [IDL home page](#).

Current licenses of IDL at NAS allow 10 users to use it at the same time. If you are not able to use IDL because the licenses are being used, try using it at a later time, or load an IDL module and issue the command `lmstat -a` to find out how many licenses are in use.
