

# Operating Systems

## Category: Software Environment

All NAS HECC systems (including Pleiades and Columbia) are running SGI ProPack for Linux which is designed to enhance the Linux experience for SGI systems.

To find the Linux kernel version number on a host, use:

```
%uname -r
```

To find the SGI release number on a host, use:

```
%cat /etc/sgi-release
```

All Pleiades front-ends and compute nodes are running with ProPack 7SP1.

All Columbia systems, including both front-ends and compute systems, are running with ProPack 6SP5.
